

In the Claims:

Please cancel claim 1 and add claims 2 through 20 as follows:

- 1    1.        (canceled)
  
- 1    2.        (new) A method for providing data over an electronic network to a wireless  
2    computing device having a browsing program, comprising:  
3        receiving a first portion of the data having a first display format;  
4        changing the data having a first display format to a second display format,  
5    wherein the second display format is capable of being displayed by the browsing  
6    program; and  
7        sending the changed data to a display of the wireless computing device before  
8    changing a second portion of data.
  
- 1    3.        (new) The method as recited in claim 1 wherein said changing comprises:  
2        compressing the received data.
  
- 1    4.        (new) The method as recited in claim 1 wherein said changing comprises:  
2        stripping out a portion of the received data.
  
- 1    5.        (new) The method as recited in claim 1 wherein said changing comprises:  
2        converting the received data from HTML to WML.
  
- 1    6.        (new) The method as recited in claim 1 wherein said changing comprises:  
2        converting the received data from HTML to HDML.
  
- 1    7.        (new) The method as recited in claim 1 wherein said changing comprises:  
2        converting the received data from HTML to PQA.
  
- 1    8.        (new) The method as recited in claim 1 wherein said changing comprises:  
2        converting the received data from HTML to XHTML.

- 1    **9.**        (new) The method as recited in claim 1 wherein said changing comprises:  
2                reformatting the received data.
- 1    **10.**        (new) The method as recited in claim 1 wherein said changing comprises:  
2                assessing a type of the received data; and  
3                changing the format in accordance with the type.
- 1    **11.**        (new) The method as recited in claim 1 wherein said changing comprises:  
2                assessing a type of the browsing program; and  
3                changing the format in accordance with the type.
- 1    **12.**        (new) The method as recited in claim 1 wherein said changing comprises:  
2                assessing a size of the display on the wireless computing device;  
3                assessing browsing program and device preferences set by the user; and  
4                changing the format in accordance with the size and preferences.
- 1    **13.**        (new) A method for providing data over an electronic network to a wireless  
2    computing device having a browsing program, comprising:  
3                receiving a first portion of the data having a first display format;  
4                changing the data having a first display format to a second display format in  
5    accordance with a location of the wireless computing device, wherein the second display  
6    format is capable of being displayed by the browsing program; and  
7                sending the changed data to a display of the wireless computing device.
- 1    **14.**        (new) The method as recited in claim 13 wherein said changing comprises:  
2                stripping out a portion of the received data.
- 1    **15.**        (new) The method as recited in claim 13 wherein said changing comprises:  
2                reformatting the received data.
- 1    **16.**        (new) A method for providing data over an electronic network to a wireless  
2    computing device having a browsing program, comprising:

3 receiving a first portion of the data having a first display format;  
4 changing the data having a first display format to a second display format in  
5 accordance with the type of application program used on the wireless computing device,  
6 wherein the second display format is capable of being displayed by the browsing  
7 program; and  
8 sending the changed data to a display of the wireless computing device.

1 17. (new) The method as recited in claim 16 wherein said changing comprises:  
2 stripping out a portion of the received data.

1 18. (new) The method as recited in claim 16 wherein said changing comprises:  
2 reformatting the received data.

1 19. (new) An apparatus, comprising:  
2 a module for receiving a first portion of data having a first display format;  
3 a module for changing the data having a first display format to a second display  
4 format in accordance with a location of a wireless computing device, wherein the second  
5 display format is capable of being displayed by the browsing program; and  
6 a module for sending the changed data to the display of a wireless computing  
7 device.

1 20. (new) The apparatus as recited in claim 19 wherein said changing module  
2 comprises:  
3 a module for stripping out a portion of the received data.
